

# A CHILD'S BRAIN DEVELOPMENT

*Look at these two brain scans.  
What differences do you see?*

*The red color shows us where a child's brain is being stimulated.*

Look how much red there is  
on this side!

Adults are spending lots of  
time talking, reading and  
playing with this child!

That is what makes his  
brain so active!

There's not as much red  
here, is there?

Adults need to spend *more*  
time talking, reading, and  
playing with this child.

That way, his brain will be  
stimulated too!
